AMB Transponders for Cars

The AMB/MyLaps X2 Transponder (red stripe) and TranX 260 (red) fulfills the requirements of Seekonk Speedway and many other auto racing organizations.

The red-stripe X2 replaces the old red TranX 260 transponder. The MyLaps X2 is compatible with all existing AMB timing systems as well as the latest X2 multi-loop systems with driver feedback.

Note: The X2 requires a computer (Windows or Mac) with a USB port. You must create a (free) account on MyLaps.com and download (free) software to activate and manage your transponder subscription.

The red TranX 260 (for auto racing) is an older design that is no longer produced but is very sort after due to it does not require a subscription. These models came in either hard wired or rechargeable and can be repaired or have battery's replaced.

The yellow TranX 160 is not suitable for auto racing.
